**Subject:** Malondialdehyde Levels in Smokers and Nonsmokers

  
12\_2000\_3100.DOC

Dear colleagues:

In preparation for the telephone conference later today, Peter Kuhl has prepared the attached table surveying literature data on potential differences in malondialdehyde levels in blood and urine between smokers and nonsmokers. It needs to be discussed whether this is a useful assay to be included as a biomarker of effect for smokers.

Have a wonderful holiday season and all the best for 2001,

Hans-Juergen
